## SENIOR SCHOOL CERTIFICATE EXAMINATION MARCH-2013

## MARKING SCHEME – ECONOMICS (*DELHI*) SET-2

## **Expected Answers / Value Points**

## **GENERAL INSTRUCTIONS:**

- Please examine each part of a question carefully and allocate the marks allotted for the part as given in the marking scheme below. TOTAL MARKS FOR ANY ANSWER MAY BE PUT IN A CIRCLE ON THE LEFT SIDE WHERE THE ANSWER ENDS.
- 2. Expected suggested answers have been given in the Marking Scheme. To evaluate the answers the value points indicated in the marking scheme be followed.
- 3. For questions asking the candidate to explain or define, the detailed explanations and definitions have been indicated alongwith the value points.
- 4. For mere arithmetical errors, there should be minimal deduction. Only ½ mark be deducted for such an error.
- 5. Wherever only two / three or a "given" number of examples / factors / points are expected only the first two / three or expected number should be read. The rest are irrelevant and must not be examined.
- 6. There should be no effort at "moderation" of the marks by the evaluating teachers. The actual total marks obtained by the candidate may be of no concern to the evaluators.
- 7. Higher order thinking ability questions are assessing student's understanding / analytical ability.
- 8. The Examiners should acquaint themselves with the guidelines given in the Guidelines for Spot Evaluation before starting the actual evaluation.
- 9. Every Examiner should stay upto sufficiently reasonable time normally 5-6 hours everyday and evaluate 20-25 answer books and should devote minimum 15-20 minutes to evaluate each answer book.

Every Examiner should acquaint himself / herself with the marking schemes of all the sets.

<u>General Note</u>: In case of numerical question no mark is to be given if only the final answer is given.

A2	Expected Answer / Value Points									
SECTION-A										
1	Expenditure on raw materials, casual labour, etc (any two)									
2	Market demand is t during a period.	1								
3	Perfect competition			1						
4	When the percentage change (	- ,	e, fall) in quantity demanded is less than the se.	1						
5	Addition to total cos	t on producing	one more unit.	1						
6		good, marginal	tility states that as a consumer consumes more utility from each successive unit consumed goes ng schedule.	1						
	<u>Units consumed</u>	Total Utility	Marginal Utility							
	1	1 10 10								
	2									
	3	24	6							
	4	28	4	2						
			<u>OR</u>							
	The two conditions at (1) The ratio of mass Suppose the conditions $\frac{MU_x}{P_x} = \frac{MU_y}{P_y}$	2								
	(2) Marginal utility	1								
7		•	income of the buyer, the demand for the good alled an inferior good.	1½						
	When with increase increases	•	income of the buyer, the demand for the good alled normal good.	1½						

8	<u>Price</u>	<u>TR</u>	Qty. S	upplied_	
	20	400	2	20	
	25	500	2	20	1
	$E_P = \frac{P}{Q}$	$\times \frac{\Delta Q}{\Delta P}$			1
	$=\frac{20}{20}\times\frac{1}{20}$	0 5			1/2
					1/2
	= 0 (No mar	ks to b	e award	ed if only the final answer is given)	
9

	4		10.5	<u>12</u>	
	5		11	<u>13</u>	
	6		<u>12</u>	17	½×6
10	(i) <u>There</u> market p			ngle seller in the market so that the seller can influence the .	
	(ii) <u>There</u>	are no	close su	ubstitutes so that there is no competition in the market.	
				to entry of new firms so that the seller, if getting above tinue to get abnormal profit. (any two features)	
	Hormark	,, 01113, 1	can con	ande to bet abilionnal pront. (any two leatures)	1½×2

y - w 1	
Good 7 P	1
Production below the potential means that total production in the economy is somewhere below the production possibility curve PP', for example at point U in the diagram.	1
When government starts employment generation schemes, and since the below potential production is due to unemployment, the economy moves forward in its attempt to remove unemployment and reach the potential. The movement forward is towards the PP' curve.	2
(Any other individual response with suitable justification should also be accepted even if there is no reference to the text)	
For Blind Candidates	
Schedule	1
Explanation (same as above)	3
(Any other individual response with suitable justification should also be accepted even if there is no reference to the text)	
$E_P = rac{ ext{Percentage change in demand}}{ ext{Percentage change in price}}$	1½
$(-)0.8 = \frac{20}{\text{Percentage change in price}}$	1
Percentage change in price $=\frac{20}{0.8}=-25$	1
i. e. price falls by 25%	1/2
(No marks if only the final answer is given)	
<u>OR</u>	
(i) More the substitutes available of a good, higher is its price elasticity of demand <b>because</b> in case of price change, the consumer can conveniently shift from one substitute good to another.	2
(ii) More necessary the good is for the consumer, lower is the price elasticity of demand for the good <u>because</u> in case of price change, it becomes difficult to reduce the consumption of the good.	2
	Production below the potential means that total production in the economy is somewhere below the production possibility curve PP', for example at point U in the diagram.  When government starts employment generation schemes, and since the below potential production is due to unemployment, the economy moves forward in its attempt to remove unemployment and reach the potential. The movement forward is towards the PP' curve.  (Any other individual response with suitable justification should also be accepted even if there is no reference to the text)  For Blind Candidates  Schedule  Explanation (same as above)  (Any other individual response with suitable justification should also be accepted even if there is no reference to the text) $E_P = \frac{\text{Percentage change in demand}}{\text{Percentage change in price}}$ Percentage change in price  Percentage change in price = $\frac{20}{0.8} = -25$ i. e. price falls by 25%  (No marks if only the final answer is given)  OR  (i) More the substitutes available of a good, higher is its price elasticity of demand because in case of price change, the consumer can conveniently shift from one substitute good to another.  (ii) More necessary the good is for the consumer, lower is the price elasticity of demand for the good because in case of price change, it becomes difficult to

13	The co	onditions a	re:						
	(1) MC = MR								
	(2) MC > MR after equilibrium.								
	Output MC MR								
	(units) (Rs) (Rs)								
	1 12 10								
		2	10	10					
		3	9	10					
		4	10	10	 Equilibrium	2			
		5	12	10	· · · · · · · · · · · · · · · · · · ·				
	4	a : a <b>+</b> la a a a	مدينه مانان		t atbiah hath the conditions are catiafied	1			
	4 unit	s is the equ	illibriun	1 outpu	t at which both the conditions are satisfied.				
14	There	are two co	ndition	s:					
	(i) MR	S = Ratio of	f prices			1			
	. ,	RS continuc	•			1			
	Explar	nation :							
	(i) Let the two goods be X and Y. The first condition for consumer's equilibrium is that MRS = Px/Py. Now suppose MRS is greater than Px/Py. It means that the consumer is willing to pay more for X than the price prevailing in the market. As a result the consumer buys more of X. This leads to fall in MRS. MRS continues to fall till it becomes equal to the ratio of prices and the equilibrium is established.								
	(Or, a	lternatively	in tern	ns of wh	nen MRS < Px/Py)	3			
	(ii) Un	less MRS co	ontinuc	ously fal	ls, the equilibrium cannot be established.				
	` ,			•	OR	1			
	(i) Other goods are of two types: Substitutes and Complements. When price of a substitute good falls, the given good becomes relatively dearer. As a result								
	its demand falls.  When price of a complementary good falls (rises) the demand for the complementary good rises (falls) and so the demand for the given good rises (falls) because both the goods are used jointly.								
	(ii)	1½							
	leads to rise (fall) in its demand.  When the consumer treats a good as an inferior good, rise (fall) in income								
		leads to fa				1½			

15	(i) False. A monopolist can sell more quantity only by lowering the price because the monopolist controls only the supply and not the demand.	3					
	(ii) True, because when the prevailing market price is higher than the equilibrium price there will be excess supply, and since the sellers will not be able to sell all they want to sell, there will be competition among sellers.	2					
	(No marks to be given for simply stating true or false unless accompanied by the relevant reason.)	3					
16	According to the Law of Variable Proportions, when only one input is increased while others are held unchanged, MP and TP change in the following manner:  Phase-I: MP increases and TP increases at increasing rate i.e. up to A on TP curve (upto K on MP curve) because there is under utilization of the fixed input.  Phase-II: MP decreases but is positive and TP increases at decreasing rate i.e. up to B on TP curve (upto L on MP curve) because there is pressure on fixed input.	2					
	Phase-III: MP decrease and is negative and TP falls i.e. after B on TP curve (after L on MP curve) because there is too much of variable input in relation to fixed input.	4					
	For Blind Candidates :						
	Schedule  Symbol (Samo as above)	2					
	Explanation (Same as above)	4					
	SECTION-B						
17	Government budget is a statement of estimated receipts and estimated expenditures of government during a year.	1					
18	Excise duty, sales tax, etc. (any two)						
19							
	(Any other individual response with suitable justification should also be accepted even if there is no reference to the text)						
20	Foreign direct investment raises the supply of foreign exchange leading to downward influence on the price of foreign exchange.	1					
		•					

21	Deposits which can be withdrawn by writing cheque are called demand deposits.	1
22	Exports of goods less imports of goods refers to <u>balance of trade</u> . Adding excess of inflows over the outflows on account of invisibles to the balance of trade is called <u>balance on current account</u> .	3
23	Appreciation of domestic currency means fall in exchange rate, i.e. price of foreign currency. It means that the importers have now to pay less domestic currency to buy one unit worth of foreign currency goods from abroad. Imports become cheaper. This raises demand for imports.	3
24	The problem of double coincidence of wants arises when there is no medium of exchange. In such a case the buyer has to make a search for the seller who also wants to buy the same good which the buyer itself offers for exchange.	1½
	Money has solved the problem by working as a medium of exchange. The seller can sell the goods in the market in return for money and buy the goods he wants to buy in return for the money.	1½
25	Objectives: (1) Allocation of resources	
	(2) Reducing inequalities	
	(3) Bringing stability in the economy.	
	(4) Any other	
	(Any one)	1
	Explanation	2
26	Expenditure that neither creates an asset nor reduces a liability is called <u>revenue</u> <u>expenditure</u> .	1
	Example : Payment of salaries etc.	1/2
	Expenditure that either creates an asset or reduces a liability is called <u>Capital</u> <u>expenditure</u> .	1
	Example : Construction of roads etc.	1/2
	<u>OR</u>	
	Excess of revenue expenditure over revenue receipts is called <u>revenue deficit</u> whereas the excess of total expenditure over total receipts excluding borrowings is	
	called <u>fiscal deficit</u> .	3
		· · · · · · · · · · · · · · · · · · ·

27	(i) Capital is stock because it is measured at a point of time.	1								
	(ii) Saving is flow because it is measured during a period of time.	1								
	(iii) Gross domestic product is a flow because it is measured during a period of time.	f 1								
	(iv) Wealth is stock because it is measured at a point of time.	1								
	(No marks to be awarded if reason is not given)									
	<u>OR</u>									
	Roduction Unds  House-holds  Final expenditure									
	Incomes are first generated in production units due to the joint efforts of factor owners from households. These incomes are distributed to the factor owners when in turn spend the income on purchasing goods and services produced in production units. This makes the circular flow of income complete.  (Explanation without the use of diagram must be awarded)	0								
28	Deposit creation by banks is determined by (1) Fresh deposits and (2) Legal Reserv Ratio. Suppose fresh deposit is Rs. 10000 and LRR is 20%. Initially banks keep Rs 2000 as cash and lend Rs. 8000. Those who borrow spend this Rs. 8000. It is assumed that this Rs. 8000 comes into banks as a fresh deposit. Banks again keep 20% of it as cash reserve and lend the rest. In this way deposit creation goes on Total money creation is Rs. 50000.	s. s o								
	Deposit creation = initial deposit $\times \frac{1}{LRR}$	3								
	(Relevant answer in any other form be awarded)	1								
29	Sales = (i + ii + vi + iv) - iii									
	= 560 + 60 + 60 + 1000 - (-30)	1½
